

Julien Pontoire

Data Science & Artificial Intelligence Engineer

Software & AI Engineering Graduate (2026) · Final-year internship at Airbus Defence and Space · AI Agents
Available from September 2026

Professional Summary

AI Engineer specializing in scalable, reliable and secure LLM agents for complex enterprise environments. Focused on workflow automation, I translate technical challenges into robust AI solutions.

Experience

AI Engineering Internship — Airbus Defence and Space February 2026 – July 2026

Workflow automation · LLM Agents · Software engineering

France

- **Internal adoption:** deployed AI tools (OpenCode, OpenClaw) and supported engineers, driving daily LLM agent use
- **Agent integration:** connected LLM agents to internal engineering tools via MCP (Model Context Protocol)
- **Workflow automation:** built a prompting language automating recurring engineering tasks, saving engineering time
- **Defect correction pipeline:** LLM pipeline automatically fixing defects from Jira tickets, cutting manual effort
- **Reliability:** Promptfoo test suite to validate prompts before rollout

Assistant Engineer Internship — Sciences Po Medialab

September 2024 – February 2025

Data collection and processing

Paris, France

- Improved and developed data collection and processing tools for the laboratory
- **Rust:** implemented stemming algorithms (Porter, Carry) in a library
- Built data collection pipelines (Reddit, press websites) for scientific research
- Developed a bookmarklet to aggregate results from multiple search engines

Projects

AI Personal Training Assistant (RAG + Fine-tuning + Agent) August 2026

- LangGraph agent orchestrating RAG (ChromaDB) and a fine-tuned model (Qwen 2.5, LoRA/QLoRA) to generate personalized training programs, with validated structured output (Pydantic) and retry logic
- REST API (FastAPI) and interface (Streamlit), deployed on Google Cloud Run with a multi-service architecture (Secret Manager, user API key management)

First Place – Internal AI Hackathon | Airbus Defence and Space

June 2026

- Multidisciplinary team, 2-day sprint: prototyped and pitched a confidential Edge AI solution with a local LLM in the browser

VR Narrator with Generative AI

February – July 2025

- Research project: developed an AI-powered narrator in a mixed reality scene for the Memorial of Internment and Deportation in Compiègne

Student Path Prediction

February – July 2025

- Analyzed a higher education dataset to predict students' academic outcomes
- Applied supervised methods (logistic regression, random forests) after PCA and unsupervised exploration

Education

Université de Technologie de Compiègne (UTC) 2021 – 2026

Engineering degree in Computer Science — GPA: 4.7/5

Compiègne, France

- **Commitment:** Elected student representative on the Academic and University Life Council (2023 – 2025)

Université du Québec à Chicoutimi (UQAC)

August – December 2025

International exchange semester

Chicoutimi, Canada

- Business Intelligence, video games, parallel architecture, metaheuristics

Baccalauréat Général

July 2021

Graduated with Highest Honors — Specialization in Mathematics and Engineering Sciences Lycée Boucher de Perthes, Abbeville

Technical Skills

AI & Data Science: LLM Agents, Prompting, Promptfoo, Ollama, Python, NumPy, Pandas, Scikit-learn, PySpark, BeautifulSoup, PyTorch, LangChain, LangGraph, RAG, Fine-tuning (LoRA/QLoRA), Hugging Face (Transformers, PEFT, TRL), ChromaDB, Qdrant, FastAPI, Pydantic

Software development: Rust, Java, C, JavaScript (VueJS, React, SpringBoot), Bash

Data & BI: PostgreSQL, Snowflake, phpMyAdmin, Power BI, ETL, Gephi

DevOps & Tools: Git, GitLab / CI-CD, Docker, Linux, VS Code, JetBrains, Google Cloud Platform (Cloud Run, Artifact Registry, Secret Manager)

Languages

French: Native speaker **English:** C1 — TOEIC 980/990 **Japanese:** A1 **Spanish:** A2
